THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 1-10 are allowable over the closest prior art to EP 1012195 (cited in the Search Report) and US 5728353 (Govoni).

The claimed invention is a method for controlling the flowability of polymer particles comprising: feeding a liquid stream continuously into a polymerization reactor comprising a polymer bed at a mass flow rate per unity of reactor surface higher than 30 Kg/h-m², wherein the polymer particles comprise a polymer and a density of solid higher than 80% of a poured bulk density of the polymer, where the density of solid is the Kg of polymer per m³ of reactor occupied by the polymer, and the polymer particles flow downward in a densified form inside the polymerization reactor, wherein at least one monomer is gas phase polymerized in the presence of a polymerization catalyst, the monomer comprising fresh monomers.

EP '195 discloses a process for catalytic polymerization in the gas phase carried out in the presence of two interconnected polymerization zones, wherein growing polymer particles flow upward through one of the polymerization zones (riser) under fast fluidization conditions, leave said riser and enter another polymerization zone (downcomer) through which they flow downward under the action of gravity, leave said downcomer and are reintroduced into the riser, thus establishing a circulation of polymer between the riser and the downcomer. It is stated that, generally, in the downcomer the growing polymer particles flow downward in a more or less densified form and, thus, high values of density of the solid can be reached, which can approach

the bulk density of the polymer ([0016]). According to a preferred embodiment of EP '195, introduction of a gas and/or liquid mixture of different composition into the downcomer is such to establish a net gas flow upward at the upper limit of this polymerization zone. The established flow of gas upward has the effect of preventing the gas mixture present in the riser from entering the downcomer ([0018]).

EP '195 does not, however, teach or in any way suggest that the flowability of polymer particles may be controlled by continuously feeding a liquid stream into the polymerization reactor at a mass flow rate higher than 30 Kg/h-m^2 as specified in present claim 1.

Govoni describes a process wherein olefins are polymerized in the presence of a catalyst capable of producing polymers having a poured bulk density of greater than 0.35 g/cm^3 and comprising a specified reaction product, by operating in at least two interconnected fluidized bed or mechanically agitated reactors wherein different concentrations of a molecular weight regulator are present (col. 7, ll. 8+). While mention is made of the possibility of achieving high mass flow rates of the polymer (*Id.*, ll. 40-45), the disclosure of Govoni fails to teach or suggest controlling the flowability of polymer particles by continuously feeding a liquid stream into the polymerization reactor at a mass flow rate as specified in present claim 1.

Thus, the closest prior art fails to describe, teach or fairly suggest the applicants' claimed method for controlling the flowability of polymer particles. Claims 1-10 are therefore deemed to define allowable subject matter and passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication should be directed to Examiner F. M. Teskin whose telephone number is (571) 272-1116. The examiner can normally be reached on Monday through Thursday from 7:00 AM - 4:30 PM, and can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu, can be reached on (571) 272-1114. The appropriate fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
